**Title:** Address Book

**Description:** An Address Book where users can add entries with a name, address, city, state, zip, and phone number. The user can edit and delete from the address book.

**Actors:** User, System

**Functionality:**

1. Users can add entries into the address book
2. Users can remove entries from the address book
3. Users can edit entries in the address book
4. Users can save the address book to the database
5. Users can sort the address book by name
6. Users can sort the address book by zip code
7. Upon saving, the system can print out the address book to the console
8. Upon closing the GUI, the system can prompt the user to save changes

**[OPTIONAL] Stretch Functionality:**

9. The system can print address book to a file
10. The user can choose the name of the file for the system to print to
